Pratteln, 11 July 2014

### **Rohner AG successfully inspected by the FDA**

Rohner today reported that it has successfully passed a recent U.S. Food & Drug Administration (FDA) inspection without any FDA Form 483 observations or recommendations. The company manufacturing facilities in Pratteln, Switzerland were the subject of the inspection, and included a general quality systems inspection of the site. This inspection was the third FDA inspection at Rohner, following the two successful FDA inspections in 2007 and in 2011.

This success underlines Rohner's strategic focus on high value-added fine-chemicals and API's in order to offer its customers highly differentiated solutions using its core strengths on the technological, regulatory and project management side.

This success reflects Rohner's continuous focus on high-quality and agile scale-up and manufacturing in close partnership with its world-wide customers and underlines our strategy towards long-term growth.

---

RohnerChem is a Swiss custom manufacturer active in Pharma, Agro, Material Science and Fine-Chemicals segments and is specialized in production of complex molecules. The company's core technologies include transition metal catalysis, enzymatic chemistry, high-pressure hydrogenations, low-temperature reactions, hydrazine handling and polymerisations. Laboratory and large scale manufacturing can be carried out according to ISO up to cGMP standards. Through the partnerships with Solvias and evocatal, RohnerChem enables optimized catalytic and enantioselective manufacturing routes.
